Office Action Summary	Application No. 10/531,419	Applicant(s) PUTZI, CHRISTIAN	
	Examiner Donald Underwood	Art Unit 3652	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

The preliminary amendment filed 04/15/05 referenced an Abstract. The referenced Abstract was not received. Applicant should submit another copy of this Abstract if he wants an Abstract other than the original.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-4, 7 and 8 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Larsen.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schmidt, et al. in view of Wu, et al.

It would have been obvious to substitute an arm as claimed for each arm in Schmidt in view of the teaching in Wu. Note Wu's arm is like the claimed arm. This would have been an obvious substitution of equivalent arms.

Claims 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Larson, et al. in view of Wooten, et al.

It would have been obvious to provide the station in Larsen with an inspection area before manufacturing in view of the teaching in Wooten to provide a way to prevent processing of defective wafers. Note Wooten figure 1. this inspection area would be positioned stations 40 in Larsen.

Claims 7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schmidt, et al. in view of Wu, et al. as applied to claim 1 above, and further in view of Gonzalez.

It would have been obvious to use end effectors in Schmidt as modified by Wu that flip the wafer to provide ability to process wafers more efficiently in view of the teaching in Gonzales.
